

## Rubber rabbitbrush (priority in NM)

Number of plants and the mean number of open flower observations made each week (in weeks 10-40) for all plants in the Continental US and for plants in the Southcentral region.

| Year      | Continental US |                 | Southcentral region |                 |
|-----------|----------------|-----------------|---------------------|-----------------|
|           | No. plants     | Mean no. obs/wk | No. plants          | Mean no. obs/wk |
| 2013      | 6              | 3.4             | 0                   | 0.0             |
| 2014      | 8              | 2.7             | 1                   | 0.3             |
| 2015      | 14             | 5.6             | 6                   | 2.0             |
| 2016      | 15             | 6.8             | 2                   | 1.8             |
| 2017      | 12             | 6.1             | 3                   | 2.8             |
| 2018      | 19             | 5.2             | 8                   | 2.3             |
| 2019      | 26             | 10.1            | 3                   | 1.7             |
| 2020      | 10             | 4.9             | 4                   | 0.5             |
| 2021      | 23             | 12.4            | 3                   | 1.7             |
| 2022      | 22             | 10.2            | 4                   | 2.1             |
| 2023      | 41             | 11.1            | 4                   | 3.1             |
| All years | 102            | 78.2            | 15                  | 18.4            |

Locations of monitored plants inside (red) and outside (green) the Southcentral region (shaded gray)
